

Website Builder

CYRONET WEB HOSTING

Our Website Builder is a fully featured Website-building tool designed to let anyone create professional, multi-page Websites. It is both easy and powerful. Some hosting companies limit the number of pages you can publish - not us! You can create as many pages as you like and update them as often as you like.

Simple to use

Your website can be up and running in 5 easy steps

1

Select your layout and colour scheme

2

Enter your details and information for the search engines

3

Choose the topic of the page e.g. home page, about us contact us etc.

4

Add your content

5

Click 'Publish!'

Over 200 templates to choose from!

There are plenty of pre-designed templates to choose from and it is completely free to use with your account. Some examples include...

It features vibrant, professional designs and pre-built templates to speed your website development.

Packed full of great features

Website Builder guides you step-by-step, providing simple choices regarding colour, style and images. There is no software to buy, and no code to learn. In addition, there is no need to use programs such as FTP or Telnet.

Content and Design Separation

The content of the website is stored separately from the layout. This way, you can completely change the look and feel of your website in six clicks of the mouse, without ever having to retype any information.

Complete Control over Colour Schemes

Website Builder includes a number of built-in colour combinations that look great with any layout. But if a user wants to add a little originality to their site, all the colours can be changed, either by using a point-and-click colour picker, or, for even more control, typing in the colour as a hex number.

On-The-Fly Image Generation

Website Builder dynamically generates the images it needs for each website design, so each time you decide to change the colour combination for a page, the layout, or just a button caption, the necessary image is automatically created. You need not ever bother with complex and expensive programs such as Photoshop to create Websites with clean and professional-looking graphics: our designers have already done it for you!

Variety of Pages

Website Builder can be used to make many different pages. You can create an online CV, or build a personal photo album. Everything is done in a simple step-by-step process that is easy to learn and to follow.

One-Click Publishing

Your website is published with one easy click. But even after publishing, you can go back and change it as much as you wish. Clicking the publish button again will instantly reflect all the changes on the "live" version of your site.

Autosave

All your information is saved the moment it is entered. If you decide to log out, you can come back and continue building your website from the very point from where you left off.
